Abstract (en)

[origin: EP0330078A2] To form individual initial products corresponding to a predetermined distribution address sequence for printed products and an individual supplement code for every single receiver address of a printed product, the stores (28, 29) containing the initial products (33, 34) are arranged one above the other, and initial products (34, 33) are taken by rotating drivers (50) and introduced to an intermediate store (62) receiving the individual initial products. Said products can be retrieved from the store (62) after the main product (newspaper) has been produced and brought together with the main products, after which the latter are correspondingly addressed and passed to distribution vehicles. <IMAGE>
