Abstract (en)

[origin: EP0330083A2] The device serves, when internally and externally plastering buildings, for adjusting edge-protecting borders to be provided in the window region. It consists of a rolling carriage 1, which has two rollers 6 arranged behind one another on the side 5 and the base 7 of which is provided with wheels 8, and which carries a holding device 13, of an angle part 2 arranged displaceably and lockably on the holding device 13 and formed from two rods 17 and 18 situated at right angles to one another, and of an angular template 3 which can be displaced and clamped on the holding device 13 and has two legs 19 and 20 enclosing an angle of 80 to 100 degrees.
