Abstract (en)

[origin: EP0330276A2] For matching the pressing force for a single-sheet removal in an office machine, for example a printer, the stack of paper sheets lies on a pressure plate which is mounted pivotably at one side on a guide shaft. A backing spring of the pressure plate is connected fixed in terms of rotation with the guide shaft, the rotation of which makes it possible for the force acting on the pressure plate to be adjusted in a simple manner. <IMAGE>
