Abstract (en)
The basket comprises claws (1, 2) for support on a ladder (15) capable of being disengaged under the effect of an upward traction transmitted by means of a movable bar (3) and a spring (5). A locking means is provided which is capable of engaging the claw in the support position by a downward movement of a bar (4) which is movable with respect to the chassis of the basket. The locking means furthermore comprises a spring (6) attached on the one hand to the bar (4) and on the other hand to an element (9) integral with the basket, this spring being stretched or compressed when the claws (1, 2) are disengaged. <IMAGE>

Abstract (fr)
La nacelle comporte des griffes de support (1,2) sur un échelon (15) capable d'être désengagés sous l'effet d'une traction vers le haut transmise par l'intermédiaire d'une barre (3) mobile et d'un ressort (5). On prévoit un moyen de blocage capable d'engager la griffe en position de support par mouvement vers le bas d'une barre (4) mobile par rapport au chassis de la nacelle. Le moyen de blocage comporte en outre un ressort (6) attaché d'une part à la barre (4) et d'autre part à un élément (9) solidaire de la nacelle, ressort qui sera tendu ou comprimé lorsque les griffes (1,2) seront désengagées.
