Abstract (en)

[origin: WO8803019A1] Ubidecarenones are effectively dissolved in aqueous media by means of N-acyl-2-amino-ethanesulphonates, wherein the acyl residues have more than 5 carbon atoms. Pharmaceutical compositions containing ubidecarenones so solubilized are particularly effective as myocardioenergetics.

Abstract (fr)

Des ubidécarénones sont efficacement dissous dans des milieux aqueux au moyen de N-acyl-2-amino-éthanesulfonates, dans lesquels les résidus acyle possèdent plus de 5 atomes de carbone. Des compositions pharmaceutiques contenant des ubidécarénones ainsi solubilisés sont particulièrement efficaces en tant que produits myocardio-énergétiques.
