Abstract (en)
[origin: EP0330741A1] Pouring cover (A) associated/able to a can/container (B) in particular for the distribution of liquids, characterized by the fact that: - it consists of a sole piece closing structure (1) in flexible material, - the closing structure (1) has a diametric opening (2) and a hinged cap-tongue (3) integrally attached to one end (3 min) of said opening (2), - said hinged cap-tongue (3) being movable in an arc-like movement with the rotation axis corresponding to an hingeing axis (b) realized in said hinging attachment (3 min), and wherein, - said cap-tongue comprises a pair of walls (5) which extend backwards and downwards, ortogonally from the said cap-tongue cover surface realizing a transversal "U"section, in order to obtain: - in closed-plane position with the cover a plug, with said pair of walls (5) protruded inside the container; - in rotated opening an "U" pouring seat/gutter in outside protrusion, for pouring the liquid from the container.
