Abstract (en)
[origin: EP0330833A2] The handling of a plastic bag, which serves as liquid container and is arranged in a carton, is very awkward. A division panel 32, arranged in the interior of the carton, divides an inner part 35 of the space for receiving the liquid container 37 at a distance from the closed lid and has an opening 38 next to one wall 14 of the carton for a nozzle 39 of the liquid container. By this means, the liquid container can be filled or emptied through this nozzle, in that the carton is arranged correspondingly, e.g. like a tapped barrel. When the lid of the carton is closed, the nozzle is not an obstruction to storing the cartons. The application is extended to packages of liquid containers, especially in the form of bags with a filling and/or removal nozzle. <IMAGE>
