Abstract (en)
[origin: EP0330958A1] The pin-driving tool possesses a barrel (3) and a muzzle part (4) rotatable about its axis. A manipulating member (9) is displaceably mounted in the muzzle part (4). This manipulating member cooperates with a sleeve (12) which is displaceable along the barrel axis and on which a cocking push-rod (19) bears at the rear. By displacement of the manipulating member (9) counter to the driving direction, a firing device (16) can be cocked via the sleeve (12) and the cocking push-rod (19). The sleeve (12) permits the use of the muzzle part (4) in any desired rotational position. <IMAGE>
