Abstract (en)

[origin: EP0330974A2] The invention concerns a footwear which is particularly suitable for severe climatic conditions, with bad weather and low temperatures, and especially on snowy ground. The footwear is composed of two separate parts, which can be assembled and disassembled as desired, respectively constituted by : an outer body (1) representing the actual shoe, made of elastomeric or plastomeric material having appropriate stiffness and resistance characteristics, and a sock (2) which can be inserted directly on the user's foot, is made of a soft, impermeable and thermally insulating material, can be freely removed from the shoe or introduced therein and is provided with a reinforcing sole (31) which enables it to be used separately from the shoe.
