Abstract (en)  
[origin: EP0331035A1] A crosshandled guard baton comprises a longitudinal club (1) and a crosshandle (2) branched thereon at a place toward a club end with a branching length comparable to a breadth of man's hand palm. The crosshandle consists of two or three partial grip members (4,6,8a,8b) which are laid one another to form a stand on a mounting base (3) on the club, wherein a shaft (13) is secured on the mounting base and is extended internally of the crosshandle to reach through a top end of the upper grip (8a), and the shaft is rotatably supported with one or two grip members while remaining grip is fastened to the shaft such that the club is turnable around the crosshandle with same spin motion of the secured grip, keeping the others in independence of a motion with the club, thereby enlarged KARATE actions being enabled, and additional improvement is directed to devices to quickly stop a swing motion of the club and to devices to shoot light or a gas for increase to defend self against an assailant.
