Abstract (en)
[origin: WO8901552A1] A metallic ceiling facing is composed of a bearing grid (2, 3) and cassettes (6). The bearing grid has longitudinal struts (2) and cross struts (3) provided with projections (26) upon which sealingly lie the cassettes (6). On order to obtain a cassette (6) arrangement that satisfies esthetic requirements and ensures the tightness required, the projections (26) have vertically projecting bars (34) upon which rests the stepped seam (88) of the cassettes (6). Seals (44) are further mounted on the projections (26) and bear against the cassettes (6) in mounting position. A safe mechanical arrangement in relation to the cassettes (6) is thus ensured, as well as a sufficient tightness of the seals (44).
