Abstract (en)
[origin: EP0331989A1] The storage and/or transport box 1, preferably made of plastic, is provided with a flat bottom 2, two side walls 3a and 3b and a front wall 4 and a rear wall 5. On the inside, the side walls 3a and 3b have retaining devices 6 for inserting partitions 8 which are essentially parallel to the front wall 4 and rear wall 5, and on which support or abutment surfaces are constructed which are effective in each case both parallel and transverse to the plane of the partitions. The retaining devices 6 consist of channel-shaped guide profiles 6 which extend in the vertical direction of the side walls 3a and 3b, are profiled so as to project outwards from the main plane of the side walls 3a and 3b, and whose maximum guide profile height ends at a distance above the bottom 2. <IMAGE>
