Abstract (en)

[origin: EP0332207A2] The method is intended for collecting residual sheets in the case of sheet-removing devices in which covering sheets are removed from board-like carriers and are fed by means of a sheet-transporting device to a sheet-collecting device. In order to achieve a high specific density of the residual sheets, it is proposed that the sheet at the end of the sheet-transporting device be fed to a winding roll whose circumferential speed corresponds at least to the sheet- transporting speed. <IMAGE>
