Abstract (en)
[origin: EP0332741A1] The invention relates to a multistage vacuum pump (1) with a housing with a minimum of two expansion chambers (11, 12, 13) in the housing and with a minimum of one duct (52) joining the expansion chambers to one another; in order to be able to detect contamination in the particularly susceptible connecting ducts by simple means it is proposed to design this as part of a bore hole (55) leading to the outside which can be closed by means of a plug (59). <IMAGE>
