Abstract (en)  
[origin: EP0332837A1] The device for assisting in putting on hosiery, in particular elastic hosiery, is characterised by a frame-type construction having at least four struts (10, 12, 14, 16) which are arranged with essentially equal spacing from one another, extend essentially parallel to one another and whose one ends are connected to one another via a first bar (18) and whose other ends are connected to one another via a second bar (20), the first bar (18) of essentially semi-circular shape with a diameter (D) corresponding to the width of the hosiery being connected to the second bar (20) of essentially U-shape with a considerably greater width. <IMAGE>
