Abstract (en)  
[origin: EP0333011A2] The invention relates to a machine for hot-printing on paper and foil substrates comprising, on a frame (1a), melting members (5) adapted to hot melt heat-fusible substances (5c), rollers (4) adjacent to the melting members (5) and adapted to transfer the heat-fusible substances (5c) to a foil substrate (3), heater devices (6) for at least some of the rollers (4) having a plurality of heater bands (6a) housed within the rollers (4) and being each linked to a thermal control of its own, deflector rolls (2) for the foil substrate (3) located downstream of the rollers (4), and cooling devices (2a) for the deflector rolls (2).
