Abstract (en)
[origin: EP0333124A2] For the banknotes or printed documents provided in separate functional units, each unit has its own transport device (8, 10-9, 10) with an associated dispensing slot (11, 12). The two transport devices are controlled via a common drive (M) in such a way that, at any one time, transport to the respective associated dispensing slot (11, 12) takes place in only one of the two transport devices. The two transport devices are designed so as to be moveable in two directions. <IMAGE>
