Abstract (en)

Lock for securing a rod 3 of an existing lock 2. As a result of the displacement of a finger fastened to the rod, a sliding bolt is compressed and escapes under the action of a spring. Opening is obtained by the transmission of one or more codes from the keypad 12 controlling an electromagnet 4, thus making it possible to release and displace the rod 3. <IMAGE>

Abstract (fr)

Verrou de condamnation d'une tringle 3 de serrure existante 2. Par le déplacement d'un doigt fixé sur la tringle, un pêne coulissant se comprime et s'échappe sous l'action d'un ressort. L'ouverture s'effectue par l'émission d'un ou de plusieurs codes en provenance du clavier 12 commandant un électro-aimant 4, ce qui permet la libération et le déplacement de la tringle 3.
