Abstract (en)
[origin: US4947992A] The innovation is directed to a storage and/or transportation case comprising longitudinal and transverse walls which incline inward from the top opening to the base, as well as two U-shaped handle stirrups which are supported at opposite sides of the case in horizontal swivel bearings which are provided at the upper edge of the case so as to be flush with one another, which handle stirrups can be folded down against the outside of the walls, so that a plurality of empty cases may be placed one inside the other, and can be swiveled inward and placed on the upper edge of the case, so that cases may be placed one on top of the other for the purpose of forming stack-type supports, and which fix a case, which is placed on, in one direction (e.g. the longitudinal direction) with stirrup parts which are bent horizontally toward the middle of the case and fix the case in the other direction (e.g. in the transverse direction) with stirrup parts which are bent down vertically at a right angle to the stirrup handle.
