Abstract (en)

The invention concerns a device adapted to a token for a deposit retainer. It is formed from two identical elements (1). Each element comprises a clip (2) provided with a boss (3), a part (4) with its locking ramp (5), two stops (6) and (7) whose function is to limit separation and to prevent disassembly, an articulation device (8), a boss (9) and a boss housing (10) allowing closure to be maintained when the token is withdrawn, a marking surface (11) framed by two openings (12) and (13), and a key ring completes the assembly through the retaining hole (14). The device is particularly intended for hypermarket customers. <IMAGE>
