Abstract (en)

[origin: EP0334821A2] The device according to the present invention comprises a supporting structure preferably out of metal tubes, consisting of a vertical post (1) solid by construction with a portion of an outwardly turned post (4) placed at an angle of about 120 DEG ; said structure is rotating following to the whole round angle, around the axis of said vertical post applied in correspondence with one side of a box container (3) or similar that may be ballasted with earth or other and that eventually may be used as a flower-pot. In correspondence with the front end of said outwardly turned portion (4) the sundshade is suspended which, by means of a cable traction means (8), operated by a handle winch (7) solid with said vertical post (1), will be opened, thus leaving free all the underneath space.
