Abstract (en)

The invention relates to a panoramic multi-sided fireplace door, in particular intended to form a protective and impervious screen for an insert fire for a fireplace hearth. The panoramic door (2) of the invention is intended to cover the different faces of the fireplace (1) at an angle in order to allow, in addition to a protection against ejections, control of the combustion while offering a maximum view of the hearth. The door (2) is articulated in low position about the shaft (13) or is retracted into the hood (4). The door (2) is formed from a wide continuous glazed strip, constituted by an assembly of glass plates or of a folded glass, accommodated in a frame which does not have a central upright. The invention is of interest to fireplace manufacturers. <IMAGE>
