Abstract (en)
[origin: EP0335075A1] The invention relates to an overflow head (6) for kitchen sinks (1) which have, in addition to the basin (2), a depressed draining part (3) with its own outlet (5). The overflow head (6) is characterised in that it is composed of flexible material and has two connection openings (7, 8), so that it can be connected both to the basin overflow (4) and to the outlet (5) of the depressed draining part (3) while overcoming inevitable manufacturing and assembly tolerances, irrespective of whether the sink is a stainless-steel sink or a substantially thicker-walled plastic sink. <IMAGE>
