Abstract (en)
[origin: EP0335153A2] This device provides a coupling between a visual stimulus and a sound sensation. By audiovisual coupling of signals from home entertainment electronic devices and transmission of these signals in the form of optical energy modulation which harmonically and synchronously supports the acoustic energy modulation, this device offers a new way of experiencing musical enjoyment. The accompanying diagram characterises one of the conditions for coupling of light sources (2) and loudspeaker (8) by an approximately identical position of radiation.
