Abstract (en)
[origin: JPH01299503A] PURPOSE: To make minute adjustment of binding in a fixed state by arranging a rotary adjusting button with a screw hole for a connecting bar. CONSTITUTION: An attaching part 14 is fixed with a hinge by a pin 30 on a binding lever 2. The part consists of a holding part having a round longitudinal hole 21 through which a connecting bar 13 can be pierced and a rotary adjusting button 22 having a screw hole for the bar. The button is supported against a fixing means 12 at a distal end of the connecting part. An assembly consisting of the connecting bar 13 and the adjusting button 22 is fixed within the attaching part 14 by a pin 30 in an axial direction. By rotating the button 22, a distance between a ring 1 and a hinge pin 30 on a binding lever can be adjusted and thus the binding is firmly bound.
