Abstract (en)

The device comprises a plurality of abutment bodies (1) arranged complementarily with respect to the feeler needles (5) of a weaving loom and slidably supported by a plate (3) applicable to the mounting couplings of a cylinder for the traction of punched tape. Actuators (12) are furthermore provided for actuating sliding movement of said abutment bodies (1) and which are arranged remote from said abutment bodies (1) and operatively associated therewith. Said actuators (12) are driven by an assembly for the processing of the image to be reproduced on the fabric.
