Abstract (en)

[origin: EP0336166A2] The cutting contact (1), formed from flat material, has two contact limbs (2) between which a wire (7) can be pressed. The mutually facing inner sides (5) of the contact limbs (2) are bent out of the plane of the material about a longitudinal edge (6) extending parallel to their longitudinal edges and are thus turned towards one another. This produces a sharp contact edge which requires a reduced contact force for making a secure contact. <IMAGE>
