Abstract (en)
[origin: EP0336311A1] A holding-down clip (20) for a rail, in particular a stock rail (10), is proposed, which emerges, in a releasable manner, from a rail-fastening plate (12) which in turn is arranged removably on a baseplate (14). This holding-down clip (20) is preferably designed as a U-shaped spring element. The rail-fastening plate itself can additionally perform the function of the holding-down clip. <IMAGE>
