Abstract (en)
[origin: EP0336367A2] There are provided two coater heads including at least pickup rolls (23,23') and coater rolls (24, 24') and the coater rolls are positioned close to each other, preferably till reaching a distance equivalent to a thickness of the base material (25), so that the coater rolls (24, 24') are disposed to serve as backup rolls for the other coater head. In accordance with the present invention, the base material can effectively be transfer-coated with an aqueous dispersion, whereby a composite material (composite film) having a well-finished appearance is obtained.
