Abstract (en)
[origin: EP0336434A1] The invention relates to a children's chamber pot (1), having an acoustic signal transmitter, especially in the form of music, having two exposed contacts (4, 5) at the bottom (3) of the pot, which contacts can be connected to each other by a conducting liquid and control the acoustic signal transmitter, the contacts (4, 5) being connected directly to a music module (6), as signal transmitter, attached to the underside of the bottom (3) of the pot. A loudspeaker (7) is arranged at the bottom (3) of the pot next to the music module and the music module (6) and the loudspeaker (7) are surrounded by a common housing (8) which is closed by a lid (9) and is integrated with the bottom (3) of the pot. <IMAGE>
