Abstract (en)

[origin: EP0336447A1] In order to seal the balcony, instead of a foil a prefabricated aluminium trough (3) is bonded to a base surface (5) by means of a bitumen adhesive (6). This aluminium trough (3) is, on the one hand, sufficiently stable to guarantee sealing for an unlimited time and, on the other hand, it can adapt to dilatations and displacements. On the sides of the balcony, edge profiles (10) of T-shaped cross-section are attached to the aluminium trough (3). The aluminium trough (3) is so inclined that the water is guided to a channel (18). <IMAGE>
