Abstract (en)  
[origin: EP0336811A1] The invention relates to a heavy-duty support which can experience slight deformation when it is being subjected to load. This support consists of a plurality of studs (3), each comprising at least one flat hydraulic jack (4) known per se, the jacks of the various studs being associated with a hydraulic circuit (5-7) making it possible, as desired, to isolate them and to put them in communication with one another when the support is being subjected to load. <IMAGE>
