Abstract (en)
[origin: JPH0276915A] PURPOSE: To provide a quickly adjustable stop by making the outer peripheral length of an inner tube equal to the peripheral length of the periphery of a sleeve, and making the peripheral length of an outer tube equal to the outer peripheral length of the sleeve, and fitting the sleeve into the outer and inner tubes. CONSTITUTION: An adjustable stop is provided with a cylindrical sleeve 1 in which a circular upper end surface 2 forms a stopping surface, and an inner tube 5 and outer tube 6 which are arranged coaxially in relation to the sleeve. When a cross-section of at least each sleeve and a part of a housing is shown, the inner tube 6 has the same outer peripheral length as the peripheral length of the inner periphery of the sleeve, and the outer tube 5 has the same inner peripheral length as the outer peripheral length of the sleeve. Then just as the sleeve is fitted into the tubes, a housing 3 provided on a first element 4, for example, equivalent to a car body, as a supporting device, its inner tube and clamping rod 7 attached to the inner periphery of the inner tube 6 of the housing, which has a clamping position providing device which applies radial stress for clamping the sleeve to the sleeve 1, and a device for supporting the housing 3 at its position, are provided.

Abstract (fr)
Une butée réglable qui comporte une douille (1) dont une surface d'extrémité (2) réalise une surface d'arrêt, une cage (3) munie de moyens de maintien sur un premier élément (4) et une tige de blocage (7).
