Abstract (en)
[origin: EP0337164A2] The invention relates to a registration device (1) for rented video cassettes (4), which has a compartment division (2) with compartments (3), each for a video cassette (4), a signal transmitter (5) emitting a signal when the particular video cassette is extracted and returned, and a data-processing system (6) with a data store which, when the signal coming from the signal transmitter (5) is received, assigns the cassette-related data to the customer-related data. By means of the device (1), the outlay in terms of administration and management in video rental businesses can be simplified in such a way that possibilities of error in the registration of the lending operation and in the reclassification of the returned rented video cassettes (4) are largely avoided. <IMAGE>
