Abstract (en)
[origin: EP0337220A2] This container particularly for cosmetics comprises a lower half-shell (2) and an upper half-shell (1) which respectively define a base and a lock lid and are mutually pivoted proximate to one of their rear edges. At least one first closure element (6) is provided near the front edge of one of the half-shells and can snap engage with a second closure element (7) provided on the other half-shell. The closure elements have mutually opposite coupling portions (9,10) which extend along directions which are substantially parallel to the pivoting axis of the half shells.
