Abstract (en)

The invention relates to an installation making it possible to channel the flow of a fluid, consisting of a series of interlocked conduit elements 2. <??>This installation is notable in that the abovementioned conduit elements 2 are mounted articulated relative to one another and are suspended at the top end of the first conduit element 2a from an anchorage point 1 located upstream. Advantageously, the abovementioned conduit elements 2 are articulated on one another in pairs by means of a disconnectable catch device 5-6 performing the function of a hinge. <??>The uses of the invention are installations intended for channelling trickling water in order to prevent damage to stabilised slopes of such installations. <IMAGE>
