Abstract (en)
[origin: EP0338222A2] A device for coating the insides of cylindrical hollow bodies with a centrifugal force effect is proposed which is to be easy to handle and capable of reliable operation. The apparatus is to satisfy the safety specifications applicable in a boring platform. For this purpose, the rotary head of the apparatus is driven by a compressed air motor and a compressed air-operated actuating cylinder is moved in the longitudinal direction of the hollow body to be coated. <IMAGE>
