Abstract (en)
[origin: EP0338272A1] A pressed roofing tile with a peripheral separating ridge at its outer edges is so constructed that the separating ridge possesses at the top edge of the tile three ridge sections parallel to the tile axis, namely two ridge sections (24a, 24b) in the two tile end regions adjacent to the upper side of the tile, and one ridge section (24c) centrally adjacent to the free bottom edge of the tile-suspension noses (21, 22), these three ridge sections serving as a support when firing the pressed roofing tile. <IMAGE>
