Abstract (en)
[origin: EP0338334A2] The invention relates to a machine for paint spraying, in particular motor vehicles. The machine is provided with at least one spray unit, for example a spray gun, and a drive device for the latter. The drive device consists of a plurality of explosion-proof electric motors which permit the spray unit to be moved linearly along two spatial axes and to be rotated about two spatial axes. The individual electric motors can be driven independently of one another according to a desired program. <IMAGE>
