Abstract (en)
[origin: EP0338359A2] The invention relates to a centrifugal polishing machine with a container (3) which accommodates loaded material consisting of workpieces and treatment bodies and the base (4) of which rotates relative to the container wall (5) about the container axis and leaves a separating gap (7) relative to the container wall (5), and, for the purpose of reducing the wear in the area of the separating gap (7), proposes to provide at least one discharge element (A) for removing particles of loaded material which have penetrated into the gap space, which discharge element (A) engages in the separating-gap space, rotates with the base (4) and/or is fixed relative to the container wall (5). <IMAGE>
