Abstract (en)

[origin: EP0338462A2] The edge-board construction exhibits tabs (25.11; 25.12) which project beyond the ends (21.1, 21.2) of the edge boards (20) and are fastened on the same side of the vertical centre of the edge board (20.1, 20.2). By the alternate insertion of the edge boards, the holding parts engage on one and the same pole (11), one lying below and the other, from the other edge board (20.2), lying above. Corresponding hooks, which engage around the outside of the pole, secure the edge boards (20.1; 20.2) against axial displacement and lateral tilting. <IMAGE>
