Abstract (en)

[origin: WO8903792A1] A wrap-around article carrier (10) having end panels (64) foldably connected to tuck flaps (48) for holding the end panels in position. A center generally triangular tuck flap (52) is foldably connected to the top panel (12) and to two generally triangular tuck flaps (54). The fold lines (56) connecting the end tuck flaps to the center tuck flap contain cutouts (58), one edge of which comprises part of an edge of the center tuck flap and overlies the top of an article in the carrier to lock the tuck flaps and the end panels in place. The other cutout edge comprises part of an edge of the end tuck flaps and is positioned to contact the side of an article to stabilize the structure.
