Abstract (en)  
[origin: EP0339620A1] The invention relates to a method for making stop cross tapes of textile fabrics with or without coating(s) from plastics or elastomers on one or both sides of end connections of slide fasteners. The essential factor of this invention is that the stop cross tapes are formed in each case by incision into the coated or uncoated fabric panel (1) which constitutes the end connection or its reinforcement; folding the panel strips (3a, b), which were produced by incision on the side of the fabric panel (1) facing the slide fastener chain, in a direction which is rotated in each case by 90 DEG relative to its original positions; and attaching the panel strips (3a, b), thus folded, parallel to the slide fastener chain directly next to the tape fold (10) on the side, opposite the slide fastener chain, of the two backing tapes (8a, b) of the slide fastener. <IMAGE>
