Abstract (en)

The process relates to the assemblage of self-supporting ceiling panels (1) in ships or buildings. Supporting profiles (5) provided with an upwards directed longitudinal flange (17) are applied along the upper part of two opposite walls (3). Several runners (6) having a lower, horizontally projecting tongue (10), a downwards directed flange (11) placed at the back and possibly an upper, horizontally projecting tongue (12) are hung up preferably opposite to each other in the flanges (17) of the supporting profiles (5) by means of the flanges (11), whereby the runners (6) can be pushed along the profiles (5). A panel (1) is placed on the tongues (10) of a first set of runners (6), whereupon the next panel (1) is placed on the tongues (10) of the next set of runners (6) and pushed together with the previous panel and so on until the whole ceiling has been installed.
