Abstract (en)

The device comprises a vessel (2) for a treatment bath (3), a support (5) for the object (6) articulated on a carriage (7) sliding vertically on the slide tracks (8), and means (9) for actuating the carriage (7) to pivot relative to the support (5), in such a way that the immersion of the object (6) in the bath (3) takes place progressively. Furthermore, since the object (6) is tubular, means (M) are provided for driving it in rotation, at least during immersion. <IMAGE>
