Abstract (en)

[origin: EP0340166A1] In order to improve the width expansion behaviour of a fabric web in a mercerising machine, the fabric web is supplied to the tenter frame (8) in a non-bound manner over a free distance and is also drawn off again from the tenter frame (8) in a non-bound manner over a free distance. In front of the tenter frame and after the tenter frame, the fabric web (2) is guided in a bound manner by means of roller arrangements (3a, 4a, 5a, 9a). For the accelerated stabilisation of the edge zones (R) of the fabric web (2), in the tenter frame (8) these are sprayed more intensively with a hot medium, especially with a hot weak lye, than in the middle zone (M). <IMAGE>
