Abstract (en)  
[origin: EP0341376A2] The invention relates to a roof ventilation pipe (1) with a mouth- side grate structure (G) formed at least partially by bars which run in a ring shape, and a cover cap (2) situated above which engages lockingly with the upper pipe end via downwardly directed projections, and proposes, in order to achieve optimum cover cap alignment, that a central projection (4) of the cover cap (2) engages positively in the inside of a circular ring bar (6), and support fingers (10) protrude from the underside of the cover cap, which rest on at least one further-outwardly situated circular ring bar (11) arranged concentrically therewith. <IMAGE>
