Abstract (en)
[origin: JPH0238255A] PURPOSE: To eliminate damage of printed sheets by arranging clamping tongues for fixing the printed sheets to a device for holding the printed sheets over a circulating passage in a saddle-shaped receiver for successively placing the printed sheets at a supply station. CONSTITUTION: Folded printed sheets 24 travel on a collecting drum 12 by being gripped by a gripper 62 of a supply conveyor 18, and after opening a fold by an opening roller 72, clamping tongues 38 are placed so as to successively stride in a range A over an opened saddle-shaped receiver 14 in a position D of the collecting drum 12 rotating in the U direction by opening of the gripper 62. The placed printed sheets 24 are fixed when the claming tongues 38 close in a range B according to rotation of the collecting drum 12, and pass without falling even when passing through the lower half part C, and the clamping tongues 38 open again in a range D. The printed sheets 24 are successively placed by repeating the said operation to thus prevent damage by reliably holding the printed sheets.
