Abstract (en)

[origin: EP0341535A2] In the case of the connection plug, conceived for rear wall wiring systems, the metal housing of the bush part (1) contains a coaxial contact (5) whose rearward connecting end is designed as a connector pin (6). The essentially cylindrical metal housing additionally has a laterally projecting flap (3) in which there is mounted a connector pin (11), likewise projecting at the rear, for the connection of an earth line. Both connector pins (6, 11), arranged e.g. at a spacing of 2.54 mm, have a pressing-in zone (13), so that the bush part (1) can be mounted using press-fit technology to a printed-circuit board (12) which is used, for example, as a wiring rear wall. The metal housing of the complementary connector part contains a coaxial contact having a conventional solder terminal for a coaxial line. <IMAGE>
