Abstract (en)

1. A cartridge with a shotgun bullet, comprising a lead head (1) with a point and a plug of resilient material connected to the lead head (1) by a plug-in connection and consisting of a top part (3) defined by a bottom end face (3b), a rod-shaped middle part (4) merging into the top part (3), and a bottom part (5) in the form of a flat-topped piston and the top part (3) is formed as a cylindrical stud (3a), characterised in that the stud (3a) completely fills a recess (1a) in the lead head (1), in that the middle part (4) is connected to the bottom part (5) via a predetermined breaking point (6), in that a projection (4a) is provided on the middle part (4) and acts as a support for the bottom part (5) during the bullet flight and in that the distance (a) between the end face (3b) and the projection (4a) is equal to the thickness (D) of the bottom part (5).
